

PAY TRANSPARENCY REPORT

PUBLISHED NOVEMBER 2024

Employer Details	
Employer	Teck Highland Valley Copper Partnership
Address	Suite 3300 – 550 Burrard Street, Vancouver, BC V6C 0B3
Time Period	Jan 1, 2023 – December 31, 2023
NAICS Code	21223 - Copper, nickel, lead and zinc ore mining
Number of Employees	1000 or more employees in British Columbia

Teck Highland Valley Copper Partnership (“Teck HVC”) is committed to fostering an inclusive and equitable workplace and ensuring fair pay for all employees across our organization. We recognize that a gender pay gap exists globally¹, influenced by factors such as the higher representation of men in senior, higher-paying roles, and with longer tenures. In the mining industry, this disparity is further influenced by the operational shift work and 24/7 demands of mine sites, which have historically resulted in a predominantly male workforce, especially in operational and technical positions. At Teck HVC, we actively strive to address the pay gap by, amongst other things, focusing on career progression opportunities for women where possible and promoting transparency around pay practices.

72% of Teck HVC employees are members of a union and paid according to the salary or wage scales in the applicable collective bargaining agreement, which scales are not influenced by gender.

Data Used in This Report

Teck HVC employees were asked and encouraged to voluntarily participate in a gender information survey for pay transparency reporting purposes. Data collected is from Teck HVC employees who elected to participate in this survey.

58% of Teck HVC employees did not participate in our survey and are included in the “unknown” category. This group includes employees who could not consent to Teck HVC using their gender information for the reporting period because they are on a leave of absence or no longer employed by Teck HVC, as well as employees who are actively employed with Teck HVC and chose to not respond.

Fewer than 10 employees reported their gender as non-binary. This classification has been excluded from this Pay Transparency Report.

HOURLY PAY

Women’s average (mean) hourly wages are 10% less than men. For every dollar a man earns on average, women earn \$0.90 cents on average. Women’s median hourly wages are 14% less than men. For every dollar a man earns, women earn \$0.86 cents in median hourly pay.

The pay gap is influenced by the distribution of genders across various roles, with senior operational roles more likely to have a higher distribution of men. This is a factor in the higher average and median pay for men.

The majority of employees at Teck HVC are members of a union and paid according to the salary or wage scales in the applicable collective bargaining agreement, which scales are not influenced by gender.

Explanatory Notes Regarding Hourly Pay

- “Average hourly pay gap” refers to the differences in average hourly pay between gender classifications.
- “Median hourly pay gap” refers to the differences in hourly wages between gender groups, calculated using the median value of hourly pay for each gender classification.
- Hourly pay does not include bonuses and overtime.

OVERTIME PAY

Women's average (mean) OT Pay is 27% less than men. For every dollar a man earns, women earn \$0.73 in average OT pay. Employees in the "unknown" category received, on average, 7% less in OT pay than men. Women's median OT pay is 16% less than men. For every dollar a man earns, women earn \$0.84 in median OT pay. Employees in the "unknown" category received 15% less in median OT pay than men.

Compared to men, women tend to work fewer overtime hours and have higher representation in less senior roles. As a result, even when women work overtime, they earn less OT pay on average than their male counterparts.

Overtime participation is voluntary. Most employees who choose to work overtime are union members, whose rates are based on the applicable collective bargaining agreement and which rates are not influenced by gender.

Explanatory Notes Regarding Overtime

- "Average OT pay" refers to the differences in average OT earnings between gender classifications.
- "Median OT pay" refers to the differences in OT earnings between gender groups, calculated using the median value of OT earnings each gender classification.
- OT earnings refer to the total amount of overtime paid to an employee and not the hourly rate for each hour of overtime.
- Calculations only include employees who had overtime earnings in the reporting period. Employees who had no overtime earnings are excluded from the average and median calculations.

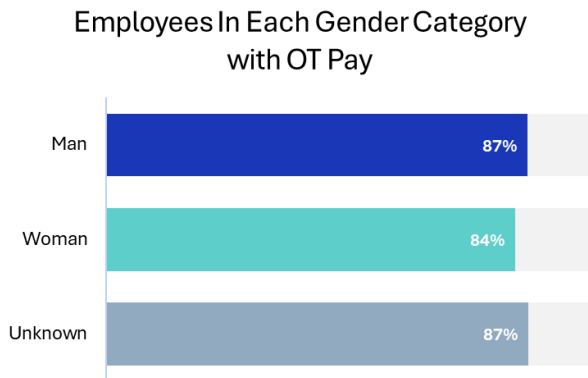

OVERTIME HOURS

Men generally work more overtime paid hours than women, both at the average and median levels. Women worked on average 32 paid overtime hours less than men. Median paid overtime worked by women was 4 hours less than men. Overtime participation is voluntary.

Percentage of Employees in Each Gender Category Receiving Overtime Pay

A slightly higher percentage of men (87%) received overtime pay compared to women (84%).

BONUS PAY

Average Bonus Gap

Median Bonus Gap

For every dollar a man earns in bonus pay, women received \$0.32 less on average and \$0.15 less at the median. Employees in the “unknown” category received \$0.28 less in average bonus pay than men, and \$0.14 less at the median. Analysis indicates that the bonus pay gap is largely due to factors such as the higher representation of men in more senior operational roles, which roles have higher bonus and long-term incentive targets.

Percentage of Employees in Each Gender Category Receiving Bonus Pay

Employees In Each Gender Category with Bonus Pay

Our unionized employees are compensated based on the terms of applicable collective bargaining agreement and are typically not eligible for bonuses.

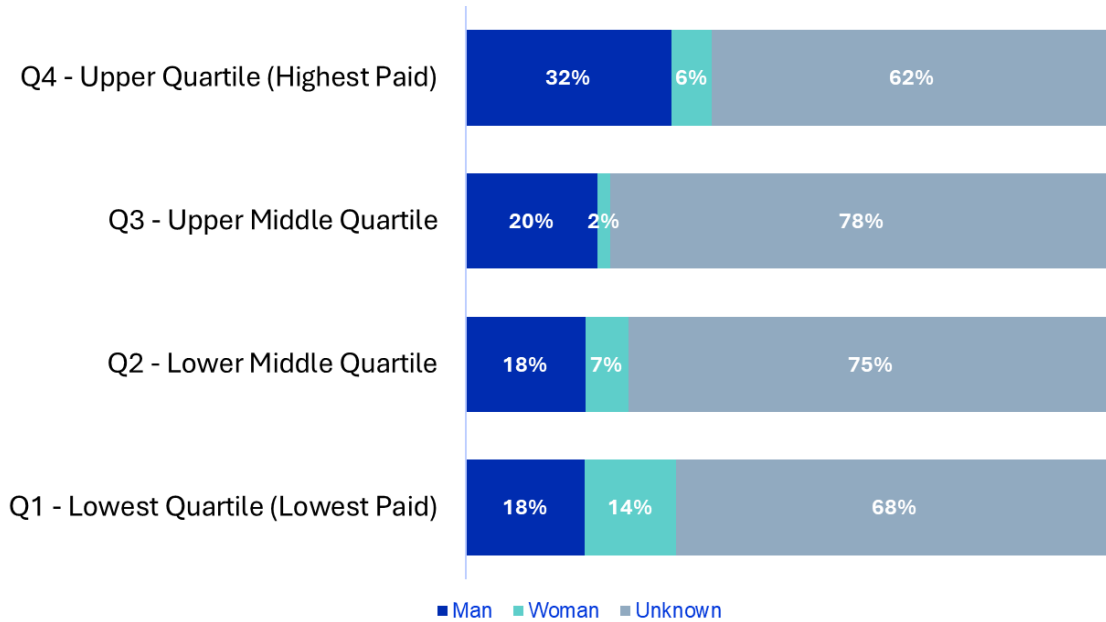

A relatively equal percentage of men (36%) and women (35%) receive bonus pay.

Explanatory Notes Regarding Bonus Pay

- Calculations only include employees that had bonus pay in the reporting period. Employees who had no bonus pay are excluded.
- Bonuses include bonus pay paid out in the reporting year.
- Certain Teck HVC employees are eligible for long term incentive awards (e.g. stock options, restricted share units), which may vest over one or more years subject to the terms of the applicable plan documents and agreements. Bonus pay includes any amounts paid to the employee during the reporting period in respect of long term incentive awards, including stock options exercised at the discretion of the employee during the reporting period.

PERCENTAGE OF EACH GENDER IN EACH PAY QUARTILE

Teck HVC recognizes that there are more men than women in the highest paid quartile. Our analysis indicates that this is likely driven by several factors, including the higher representation of men in higher-paying, operational roles and their longer tenures. While we have made reasonable efforts to gather gender information from our workforce, the results in this report are also impacted by the voluntary nature of participation, which is reflected in the substantial percentage of individuals classified as “unknown”.

Explanatory Notes

- Data point is based on hourly pay.
- A quartile divides the data points into four parts of equal size. The hourly pay data points are ranked from highest to lowest.
